# THE SUMMIT IS CLEAR

once you pass through the clouds

We believe that every patient deserves to know what is driving their cancer and which therapeutics can treat it.

## Genomic testing illuminates the path

Each tumor has a genomic fingerprint that may help physicians map the best path to overcoming it.

## Blazing the trail to make genomic insights actionable

We develop drugs to inhibit the specific alterations that have been identified as drivers of cancer — no matter how rare.

## Our lead candidate **seribantumab** inhibits tumor growth driven by **NRG1** gene fusions.

Seribantumab is being studied in CRESTONE, a Phase 2 trial for patients with solid tumors of any origin that test positive for an NRG1 fusion. Learn more at [www.NRG1fusion.com](http://www.NRG1fusion.com).
